DISSEMINATION IN THE UNITED STATES**

**PROSPERO BEGINS SECOND PHASE DRILLING AT PACHUCA SE
PROJECT, HIDALGO STATE, MEXICO**

January 21, 2019 – Vancouver, B.C. - Prospero Silver Corp (PSL.V; the “Company” or “Prospero”) is pleased to announce that Phase 2 drilling has started at the Pachuca SE project, close to the historic mining city of Pachuca in Hidalgo State, Mexico.

On December 10, 2018 Prospero announced that Fortuna Silver Mines Inc. (“Fortuna”) exercised its right to be granted an option to acquire up to a 70-per-cent interest in the Pachuca Southeast project located close to the historic mining city of Pachuca in Hidalgo state, Mexico, by spending a total of \$8-million (U.S.) in qualifying expenditures and completing a preliminary economic assessment, with a minimum spend of \$1-million in the first year.

Prospero has mobilized a drill rig which arrived at Pachuca SE in early January. A six hole, 4,200m program started on January 14 to test a number of potential vein targets. In Q1 2018, Prospero, with financing provided by Fortuna, completed a 1,800-metre drill program (three holes) testing three distinct targets with deep, angled holes. Drill collar maps and draft sections for the Pachuca drill holes are available at Prospero's website. PSE-18-01 and PSE-18-03 each cut the possible tops of new vein systems. PSE-18-02 intersected three argillic caps in the shallow portion of the hole and three mineralized veins at depth. For full results of the drill program, please see the company's press releases dated March 14, 2018, and March 29, 2018.

Tawn Albinson, the President of Prospero commented: “Our 2018 program appears to have successfully cut the upper parts of a series of blind epithermal veins hosting silver and gold mineralization. This is particularly exciting given how close the project is to the historic Pachuca-Real Del Monte camp. The current Phase 2 program is designed to follow up on the 2018 hits and to drill test a number of additional altered structures that weren't tested in Phase 1. I look forward to reporting on the drilling during Q1.”

The 6,669-hectare Pachuca Southeast land package is 24 kilometres southeast of the city of Pachuca, Hidalgo, along strike from the historic Pachuca-Real del Monte epithermal vein camp, one of the world's largest epithermal precious metal deposits. The local geology at Pachuca Southeast is typical of the high-level epithermal environment seen over the Pachuca-Real del Monte mines. Prospero's land package covers at least six to seven kilometres of linear, structurally controlled argillic alteration caps at surface, which Prospero's team considers are the surface expression of blind, low-sulphidation, epithermal-style veining. Infrastructure is excellent, with nearby major power lines and a major freeway.

Epithermal-style argillic alteration is associated with anomalous Au, Ag and Zn geochemistry, exposed in an erosional window into an andesitic and felsic volcanic pile. The anomalous geochemistry and clay alteration are essentially identical to that seen in the Vizcaina structure above the Pachuca Mine. Prospero's technical team have mapped hydrothermal alteration and geochemical anomalies associated with structures which indicate the alteration could host a preserved Pachuca-type epithermal deposit at depth. The first hole of Phase 2 will target Varal West, a series of silicified rhyolite reef structures with alunite alteration. Varal West is located approximately 1 km west and along strike of the veins intersected in PSE-18-02.

Qualified Person

Tawn Albinson, M.Sc., President of the Company, is a Qualified Person, as defined in NI 43-101, and is responsible for the technical content of this news release. Mr. Albinson is a Member of the American Institute of Professional Geologists and a Certified Professional Geologist (CPG) No. 11368.

About Fortuna Silver Mines Inc.

Fortuna is a growth-oriented, precious metals producer focused on mining opportunities in Latin America. The company's primary assets are the Caylloma silver mine in southern Peru, the San Jose silver-gold mine in Mexico and the fully-permitted Lindero gold project in Argentina.

About Prospero Silver Corp.

Prospero is a Mexico-focused project generator listed on the TSX.V under the symbol PSL.V. Prospero's aim is to discover world-class precious metal projects in the major mineral belts of Mexico. The Company applies a unique blend of practical exploration experience, cutting-edge mineral deposit science, and an extensive knowledge of Mexico's geology to find new gold and silver systems. Our exploration programs are run by a small but highly-focused geological team based in Mexico.

Forward-Looking Statement Cautions:

This press release contains certain "forward-looking statements" within the meaning of Canadian securities legislation, relating to, among other things, the Company's proposed use of the financing proceeds. Although the Company believes that such statements are reasonable, it can give no assurance that such expectations will prove to be correct. Forward-looking statements are statements that are not historical facts; they are generally, but not always, identified by the words "expects," "plans," "anticipates," "believes," "intends," "estimates," "projects," "aims," "potential," "goal," "objective," "prospective," and similar expressions, or that events or conditions "will," "would," "may," "can," "could" or "should" occur, or are those statements, which, by their nature, refer to future events. The Company cautions that Forward-looking statements are based on the beliefs, estimates and opinions of the Company's management on the date the statements are made and they involve a number of risks and uncertainties. Consequently, there can be no assurances that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Except to the extent required by applicable securities laws and the policies of the TSX Venture Exchange, the Company undertakes no obligation to update these forward-looking statements if management's beliefs, estimates or opinions, or other factors, should change. Factors that could cause future results to differ materially from those anticipated in these forward-looking statements include, possible, accidents and other risks associated with mineral exploration operations, the risk that the Company will encounter unanticipated geological factors, the possibility that the Company may not be able to secure permitting and other governmental clearances necessary to carry out the Company's exploration plans, the risk that the Company will not be able to raise the additional funds in the future to continue to carry out its business plans, and the risk of political uncertainties and regulatory or legal changes that might interfere with the Company's business and prospects. The reader is urged to refer to the Company's reports, publicly available through the Canadian

Securities Administrators' System for Electronic Document Analysis and Retrieval (SEDAR) at www.sedar.com for a more complete discussion of such risk factors and their potential effects.

This news release does not constitute an offer to sell or a solicitation of an offer to buy nor shall there be any sale of any of securities of the Company in any jurisdiction in which such offer, solicitation or sale would be unlawful, including any of the securities in the United States of America. The Company's securities have not been and will not be registered under the United States Securities Act of 1933 (the "1933 Act") or any state securities laws and may not be offered or sold within the United States or to, or for account or benefit of, U.S. Persons (as defined in Regulation S under the 1933 Act) unless registered under the 1933 Act and applicable state securities laws, or an exemption from such registration requirements is available.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
